DomeVex[®] Wide View Convex Mirror

Se-Kure Domes and Mirrors has a unique solution to many problem intersections, the hybrid ***DomeVex***[®] line of wider view convex mirrors. These special mirrors provide three times the viewing area of a regular convex mirror. The ***DomeVex***[®] mirrors are made to provide a full 180° viewing exposure, with the clarity and vertical mounting flexibility of a regular convex mirror. A truly pro-active solution, bringing the 180° viewing surface down to the eye level of pedestrians and forklift operators.

Indoor and outdoor models available in 16", 24", 32", and 42"

Horns, cameras, blue light warning and motion detecting systems with lights are great warning devices to add to the safety of the workplace, but Safety Mirrors will show what is coming around a corner and approaching vehicles will be able to see ***you as well.***
